Packaging and  
Industrial Polymers

## Recycling of Surlyn® skin packs acknowledged by paper makers

Consumers today are uncertain. They do not know whether skin packs should be classified as plastic or cardboard packaging.

At the request of DuPont, the PTS Munich, Germany, investigated the suitability of skin packs with Surlyn® film for recycling. The research was based on the PTS standard, which is widely used in the paper industry.

That study showed that skin packs made with Surlyn® film can be recycled by normal paper industry reprocessing techniques, without difficulty and with no limitation on volume.

### SO WE RECOMMEND:

You mark your packaging with this logo

and consumers who were previously not sure will be grateful.

Extracts from the PTS report are printed overleaf. The full text is of course available at any time from the DuPont press office.
